

SEE EVERYTHING. CONTROL EVERYTHING. IN REAL TIME

QUICKMONITOR

REAL-TIME MONITORING SYSTEM

Turn machine data into

OPERATIONAL DECISIONS

QUICKMONITOR is the solution that integrates CNC machines, production systems and operational data into a single monitoring platform, to measure processes and optimize margins.

— Discover how QUICKMONITOR transforms your production data

All the benefits

Everything you need, accessible anywhere.

01

Real-time monitoring

- Machine status always under control
- Job progress tracking
- Alarm and downtime monitoring

02

Automatic data capture

- Real machining times
- Machining phase recognition
- Production data collection

03

Dashboards & operational KPIs

- Browser-accessible dashboards
- Reporting and KPIs
- Access from any device

04

ERP/MES & WORKPLAN integrated

- Connectivity with ERP and MES
- Native integration with WORKPLAN
- API support and integration with external applications

From machine data to job cost

Integrated into your ecosystem.

CNC & IoT controls

Read directly from the controller. Even legacy, special or non-connected machines.

QUICKMONITOR

Collection, synchronization and analysis, all in real time.

Job cost

From real machine time to cost, without re-entering a single value, with WORKPLAN or ERP.

Compatibility

We connect any machine fleet, even legacy or special

40+

SUPPORTED CNC TYPES
and documented industrial protocols

D.ELECTRON • ECS • FAGOR • FANUC • FIDIA •
HEIDENHAIN • MITSUBISHI • MT-CONNECT • OPC UA •
SELCA • SIEMENS

SUPPORTED PROTOCOLS

MTConnect

Industrial CNC standard

OPC UA

Industrial automation

ModBus

Legacy machinery

HTTP

Web connectivity

SQL

Enterprise databases

CNC libraries

Proprietary and native

Why Vero Project Group

Industry expertise

Over 25 years of knowledge of manufacturing processes

Consulting approach

We support our clients with a value-driven analysis approach.

Global presence

Local execution, global scale.

Our solutions
